

Ch. 1 - Matter

II. Classification of Matter (p.15-17, 397-398)

- ♦ Matter Flowchart
- ♦ Pure Substances
- ♦ Mixtures

Mr. Scott

A. Matter Flowchart

A. Matter Flowchart

♦ Examples:

- | | |
|-------------------|-----------------|
| ♦ graphite | element |
| ♦ pepper | hetero. mixture |
| ♦ sugar (sucrose) | compound |
| ♦ paint | hetero. mixture |
| ♦ soda | solution |

Mr. Scott

B. Pure Substances

♦ Element

- ♦ composed of identical atoms
- ♦ EX: copper wire, aluminum foil

B. Pure Substances

★ Compound

- ◆ composed of 2 or more elements in a fixed ratio
- ◆ properties differ from those of individual elements
- ◆ EX: table salt (NaCl)

Mr. Scott

B. Pure Substances

★ For example...

Two different compounds,
each has a definite composition.

C. Mixtures

- ★ Variable combination of 2 or more pure substances.

Heterogeneous

Homogeneous

Mr. Scott

B. Pure Substances

★ Law of Definite Composition

- ◆ A given compound always contains the same, fixed ratio of elements.

★ Law of Multiple Proportions

- ◆ Elements can combine in different ratios to form different compounds.

Mr. Scott

C. Mixtures

◆ Solution

- ◆ homogeneous
- ◆ very small particles
- ◆ no Tyndall effect
- ◆ particles don't settle
- ◆ EX: rubbing alcohol

Tyndall Effect

Mr. Scott

C. Mixtures

◆ Colloid

- ◆ heterogeneous
- ◆ medium-sized particles
- ◆ Tyndall effect
- ◆ particles don't settle
- ◆ EX: milk

Mr. Scott

C. Mixtures

◆ Suspension

- ◆ heterogeneous
- ◆ large particles
- ◆ Tyndall effect
- ◆ particles settle
- ◆ EX: fresh-squeezed lemonade

Mr. Scott

C. Mixtures

◆ Examples:

- ◆ mayonnaise colloid
- ◆ muddy water suspension
- ◆ fog colloid
- ◆ saltwater solution
- ◆ Italian salad dressing suspension

Mr. Scott
